

Concept Evolution™:

Digital Dashboard

Digital Dashboard provides a real-time, easy to understand graphical representation of Key Performance Indicators (KPI's) defined and tailored according to individual requirements.

Digital Dashboard can harness data not only from Concept™, but third party systems. Users are provided with access to relevant metrics and performance output thus providing the ability to measure performance and key business metrics at a glance.

Central Management Information (MI) can be captured, and provided at operational, tactical and strategic levels, including drilldown capability between KPI's and Concept™ Reports / Crystal Reports®. Reports can be published on a homepage in Concept Evolution™ and as individual widgets in the Concept Reach™ portal.

Digital Dashboard can reduce administration time, by allowing organisations to produce and deploy data driven dashboards and KPI's to a precise audience. These dashboards can be further customised by individuals, to display information most relevant to their role. Users are able to respond quickly to potential problems or opportunities, and to accomplish specific facilities and infrastructure management goals, thanks to having real-time information at a glance.

Digital Dashboard is delivered with an initial suite of industry standard KPI's, and allows the user to select those most relevant to their organisation. Additional KPI's can be defined and deployed to relevant individuals or groups.

Standard KPI's include:

- Number of incomplete/outstanding/open helpdesk calls.
- Top ten assets with highest failure rates.
- Failure analysis KPI's, including mean time between failures and mean time between repairs.
- % of compliance with Service Level Agreements (SLA's) by contract.
- Room and space utilisation.
- Actual V's committed purchase order spend.
- Trend V's current for tasks logged per day.
- Average time to resolve calls by discipline.
- Users can also drill down to other KPI's and alternative URL's.
- Live User count.

Features of Digital Dashboard include:

- Third party database connection.
- Real-time snapshot of KPI's.
- Customisable by authors and recipients.
- Measurement of performance and key business metrics.
- Reduction in administration time.
- Industry-standard KPI's provided.
- Definition and deployment of additional KPI's based on criteria of intended individuals or groups.
